

FIBONACCI LEVELS CHEAT SHEET

KEY FIBONACCI RETRACEMENT RATIOS

23.6% Retracement

Shallow pullback level. Indicates extremely aggressive momentum trend.

Rule: Common in runaway parabolic impulse moves.

50.0% Equilibrium

Dow Theory midpoint (Gann equilibrium). Balanced price point.

Rule: Optimal risk-to-reward entry threshold.

78.6% Deep Retracement

Deep discount level. Last line of defense before structure invalidation.

Rule: Tight Stop Loss placement just below 100% swing.

38.2% Retracement

Moderate pullback zone. Healthy trend continuation signal.

Rule: Ideal entry when aligned with 20 EMA trendline.

61.8% Golden Ratio

Primary harmonic turning point. Highest statistical reversal probability.

Rule: Look for candlestick confirmation at this level.

88.6% Harmonic Reversal

Extreme retracement used in Bat & Crab harmonic pattern completions.

Rule: Provides massive 1:4+ Risk-to-Reward potential.

FIBONACCI EXTENSION RATIOS (PROFIT TARGETS)

- 27.2% Target (TP1)

Conservative swing projection. First institutional take-profit zone.

Rule: Take 50% partial profit and move SL to break-even.

- 61.8% Target (TP2)

Golden extension target. Full impulse swing wave projection.

Rule: Major institutional profit-taking turnaround level.

127.2% Extension

Breakout extension target for inverted trend waves.

Rule: Common turning point for harmonic formations.

161.8% Super Extension

Complete macro impulse expansion (Elliott Wave 3 target).

Rule: Exhaustion zone; prepare for deep macro correction.
